

I am very much afraid of what can happen to our area(the Port au Port Peninsula) if fracking is allowed to proceed here.It will have traumatic results to our fresh water,our Port au Port Bay, no fish can live in such a polluted chemical environment.It will leave a devastation to our whole environment (Land,Sea & Air.We have a beautiful & clean place to live right now,why would we want to see this change to devastation & ruin,for our lives & our health,& for our kids & grandkids lives.I think it is just ludicrous to even consider such a thing happening here.If oil cannot be drilled the normal way,it certainly should not be fracked.There are far too many bad things that fracking can cause & has been proven to have caused in areas where it is now banned because of it.I hope & pray this will never happen here,to the place we enjoy & have lived all our lives in a fairly clean environment.My husband feels the same way I do about any fracking.Sincerely, A. Hunt.
