

I would like to be able to raise my children in an unadulterated NL. I feel very strongly that this panel should have some female and aboriginal representation to better understand some of the more specific impacts of health upon child rearing individuals, and in all fairness at least one aboriginal person should have been appointed to this review panel. There is an election coming and this oversight will not readily be forgotten. The canvas for my concern is the fact that Heath and climate changes pertaining to fracking the world over are a very real concern with Bans everywhere. Shouldn't representation be fair therefore across the board? I feel strongly that true opportunity is being missed for the people by the people to express concerns around this subject with only 2 showing opportunities in places like stephenville and cornerbrook, what about port au port?? I do not want the health concerns, the poisoned water or lack of it, and the foulness of death to our greenery from benzene methane and other chemicals. I wonder who will tend to our ONE access road from traffic related to this terrible business. NL green shale is NOT suitable for fracking as pointed out in one of the governments own articles (shown to have frequent redactions by the way) In all let's not frack NL? Thank you for reading my concern.
