

Keep Newfoundland and Labrador frack-free

Ban fracking in Newfoundland and Labrador! There is widespread community opposition to fracking. Nova Scotia and New Brunswick have moratoriums. We need to transition to green energy.

CO2 and methane are very damaging to the environment! Air emissions and seismicity are all real concerns. Fracking for shale oil presents unique risks including increased volatility during transport.

I worry about the unsustainable amounts of water needed for fracking operations, and that hazardous chemicals are used that destroy water --- there is no proven safe method of disposal!

Please don't let this happen!

Sincerely,

C. Cronin
