

To Dr Ray Gosine :

Rocky Harbour is my home and oil companies have no right to come into the west coast area and inflict harm on my environment, my health and my community. That is because:

1. We are not interested in having an increased volume of large trucks clogging and ruining route 430.
2. Too many fracking sites have failed to be contained upon leakage. Do not pollute our waters, our land and our air.
3. Comprehensive studies demonstrate drastic health consequences after an area is subjected to fracking.
4. We need what is left of the fishing industry to help our fishermen make a living.
5. We need to encourage our tourism industry.

For those reasons, I demand that public consultations be held in the Bonne Bay area and all along the west coast. This is where it matters. Make it a real public consultation!

In closing, I ask you to review the recent comprehensive study completed by the Health Professionals of New York. The findings of the Health Professionals of New York is certainly compelling.

Sincerely,  
D. Evans
