

Keep Newfoundland and Labrador frack-free

As a proud Canadian, I would like to take this opportunity to express my deep concern about possible fracking on the west coast of Newfoundland. My concerns are multiple and come from articles I have read regarding the dangers of fracking. These include that huge amounts of water are needed in the process of fracking which may affect the provinces water, hazardous chemicals are used and aside from environmental concerns with that, there are no safe disposal methods for them and air emissions of CO2 and methane are very damaging to the environment.

Newfoundland is such a beautiful province. Please ban fracking in NFLD and Labrador. Listen to your own constituent communities and do the right thing.

Sincerely,

D. Strong
