

Keep Newfoundland and Labrador frack-free

"it is impossible to build a well that does not leak " Dr Anthony Ingraffea Ph.D. Rock fracture mechanics .
The annulus is filled with cement to prevent leaking Even with a perfect cement job, assuming no air pockets , which is unlikely with long laterals, as cement dries it shrinks , therefore the annulus is not filled with cement

Increasing economic dependence on fossil fuels at a time when the need to stop using fossil fuels is crucial, is like eating our grandchildren, an abomination and violation of everything we hold sacred

Sincerely,

G. May
