

The need to change to earth friendly energy very quickly is critical! We can't stick our heads in the sand and go on as usual.

Fracking is so bad in so many ways - water use and contamination of ground water, terrible emissions and few jobs.

Have the guts to lead and represent the people and the the environment that is so crucial for us all. I wish we could stop fracking in BC - our Premier doesn't seem to know the word, all she talked about are natural gas exports which are dodging in world competition anyway.

From the public's point of view - we don't like it here and we don't want it anywhere in Canada!

Sincerely,

G. Stuart
