

Keep Newfoundland and Labrador frack-free

There is no doubt that once the crust of our finely balanced planet is violated by breaking up what maintains its stability - the layers beneath it - the ground upon which we stand let alone depend upon for our livelihood will cause untold long-term destruction to all life.

When greed determines the future it's no wonder humanity fears the possibility of a bright future.

Stop breaking up our foundation. Plan for a greener, kinder world where hope is woven into the threads of each day.  
**STOP FRACKING.**

Sincerely,

H. May
