

I fully believe that Newfoundland and Labrador should NOT proceed with fracking, for a variety of reasons, such as how much it affects our tourism, water, and even our economy to name a few.

I am sick of watching boom and bust ruin everything in its path as big oil companies walk away with all the wealth and we are left with the economic and ecological disasters afterward.

I am 22 years old, and I feel that this is MY future, my future children's future, everybody's future that you are dealing with and I would like to see Newfoundland look at the province in a sustainable matter, not in such a way to leave the future generation with mess to clean up. I do not want to leave this with people who want to make a quick buck and get the hell out Newfoundland, a province where the beauty amazes me still everyday (22 years and counting) and where our culture is so rich and diverse and I do not want fracking to destroy what makes me a Newfoundlander.
