

Keep Newfoundland and Labrador frack-free

I urge you to please do everything in your power to prevent fracking from Newfoundland and Labrador
My partner and I are in the process of moving to the Maritimes to live & work, and fracking is the last thing I want to see out there.

I am gravely concerned about the following points:

- Water use: unsustainable amounts of water are needed for fracking operations.
- Fracking wastewater: Hazardous chemicals are used that destroy water and there is no proven safe method of disposal.
- Climate impacts: CO2 and methane are very damaging to the environment. Air emissions and seismicity are all real concerns. Fracking for shale oil presents unique risks including increased volatility during transport.
- Socio-economic impacts: low-income communities are often targeted. The promise of jobs rarely transpires.

Sincerely,

J. Ross
