

Hello,

Fracking should be a no no in most areas in Canada. It definitely should be in Newfoundland and Labrador. Water would be wasted , made unusable , after hazardous chemicals had been added for fracking. There is no safe way to dispose of same.

Emissions of methane and CO2 plus the seismicity are damaging . The transport of shale oil is very volatile. This does not provide endless jobs, rather , it destroys communities , that cannot be repaired.

There is a widespread opposition to fracking in Newfoundland and Labrador, please, don't ignore that. Energysources need to be transitioned to green , environmentally safe energies.

Thank you, for taking the time to read my concerns, keep Newfoundland and Labrador fracking free.

Sincerely,

J. Singh
