

Keep Newfoundland and Labrador frack-free

Any place where there is not fracking should be protected from fracking and fracking needs to end. Fracking uses up the water supply and returns non-potable water back to the environment.

Allowing fracking - an expensive wasteful manner of extracting fossil fuels - just delays investment in alternative energy that is both safer and cheaper to produce. Don't encourage wasteful spending by energy companies by allowing fracking. Energy producers need to quit relying on fossil fuels as a business enterprise and enter the 21st century.

Thank you for allowing me to comment.

Sincerely,

K. Morse
