

Keep Newfoundland and Labrador frack-free

Dear Panel members, I am writing to urge you to think of the people of Newfoundland and Labrador and put a moratorium on fracking, as my home province of New Brunswick has done. If you want to act on climate change and spare your citizens from contaminated earth, air and water supplies, then you must say 'No' to fracking. The numerous toxic and carcinogenic materials chemicals used by this industry cannot be safely stored and are next to impossible to remove from areas that have been fracked. Destroying the water table during hydraulic fracking drilling can create poisonous wells and well water and ultimately lead to drought conditions . Air quality is adversely impacted, as well as the health of people living near these sites. I urge you to go to greener energy technology for sustainable jobs and a sustainable future for the people of Newfoundland and Labrador. Thank you.

Sincerely,

M. Bhroin
