

I would like to add my voice to the others who oppose fracking in NL. I have great concerns regarding the environmental and health impacts. One quick example: The EPA has recently linked fracking to the drinking water issues in Dimock, Pa, USA. One example of many. Or, look at the damage to personal property and the environment caused by oil spills and leaks resulting from fracking combined with flooding in Colorado. NL is a well-known tourist destination, thanks to its natural beauty. Fracking jeopardizes that as well, due to environmental damage, unsightly industry, and public opinion of fracking. Let's invest in alternative energies instead. Like wind. We certainly have a lot of that, and it is renewable.

Please consider the extreme negative impacts of fracking and so no to allowing it in NL.

Thankyou
