

In these days of worrisome water shortages around the world, unsustainable amounts of water are used in the fracking process. On top of that, the water used is so full of hazardous chemicals that at present, there is no way of using it, and no proven safe method of disposal.

Emissions are damaging to the environment.

Greed, and over consumption are a dangerous threat to the world now and in the future.

The majority of the populations of this area are opposed to fracking.

Sincerely,

R. Scovill
