

Keep Newfoundland and Labrador frack-free

Stop this insanity. What the oil companies have done in the U.S. AND CONTINUE TO DENY ABOUT FRACKING, is disgusting. Tap water that lights on fire?!?! Destroying the planet for dwindling resources is madness. Big business won't be responsible in the name of greed so Governments must!!!!

Consider:

Water use: unsustainable amounts of water are needed for fracking operations.

Fracking wastewater: Hazardous chemicals are used that destroy water and there is no proven safe method of disposal.

Climate impacts: CO₂ and methane are very damaging to the environment. Air emissions and seismicity are all real concerns. Fracking for shale oil presents unique risks including increased volatility during transport.

Socio-economic impacts: low-income communities are often targeted. The promise of jobs rarely transpires.

I don't want this in my country anywhere!!!!

Keep it out of Newfoundland and Labrador.

We need to transition to green energy. That is an investment in our planet.

Sincerely,

S. Anker
