

Keep Newfoundland and Labrador frack-free

Fracking is just not worth it. It destroys vast amounts of water, puts the environment and peoples' health at risk, and all for the sake of obtaining more of a highly undesirable energy source. Fossil fuels have had their day, but it's not the way to move into the future. It's time this country put its money into renewable energy sources. Keep Newfoundland and Labrador frack free.

Sincerely,

S. Troyer
