

We have all seen the repercussions that result from Fracking, mostly in contaminated ground water that many people in rural areas use for their drinking water. This is bad for the people and environment, all for the sake of faceless cooperations to reap a greater, faster profit.

Many people in rural Alberta have already paid the price for this mistake, I believe this debate is best summed up in the quote: "Insanity is doing the same thing over and over and expecting different results.". Learn from the mistakes of the past and ban fracking Newfoundland and Labradaor, preserve and keep safe the health and natuaral beauty of your province.

Show that you actually favour your constituents and protect them from this plague on the land that is fracking.

Sincerely,

T. Antonio
